Passive House – Falmouth

An Award Winning Certified Passive House

The Valle Group recently completed one of the first Passive House residences to be built and certified in the Northeast. Designed and built to the rigorous Passive House Institute standards, the super-insulated, air-tight home is one of the most energy efficient homes in the country.

The waterfront house includes triple-glazed windows, photo-voltaic and thermal solar panels for generating electricity and hot water. Large south facing windows offer spectacular views of Vineyard Sound with maximum solar gain to heat the house passively.
